

Homework 5 Collaboration

Glen Madsen

March 26, 2018

I altered the addEdge class in hw4 by changing an if-statement to require the two nodes to be different from one another before an edge is added. In this way, reflexive edges are no longer allowed. I also slightly altered the hw4 test files to be compatible with this, but those were not submitted so that is irrelevant. That was the only change I made. I also commented out all of checkReps except for when the graph is created and the Marvel checkReps so it can run efficiently. Those were the only changes I made.
