

Homework 5 Collaboration

Glen Madsen

March 26, 2018

I altered the `addEdge` class in `hw4` by changing an if-statement to require the two nodes to be different from one another before an edge is added. In this way, reflexive edges are no longer allowed. I also slightly altered the `hw4` test files to be compatible with this, but those were not submitted so that is irrelevant. That was the only change I made.
